

Profile

föllmer systems gmbh, 57234 wilnsdorf, germany
(referred to as "föllmer systems")

Briefing

You may receive from föllmer systems:

Customized software, software for CNC and automation, and matching hardware, respectively.

Business Scope

After joint analyzing your requirements, you will receive solution recommendations accompanied by a competent and reliable consultancy in the following business scope:

- Software „CellMan“: the package offers increasing throughput of machine tools without adding attended time. CellMan is independent to machine technologies and vendors and solves the requirements (1 piece production, high flexibility) of a tool shop while increasing your productivity by adding unattended production.
- Customized software development and consultancy based on your requests.
- CNC and complete electronic package for special machinery tools (development and distribution of a highly efficient electronic package).

References

Software:

Enhancing your productivity by customized office applications through data base and object management systems to workshop organisation and –automation.

Project examples:

- FMS (Flexible Manufacturing System) of workflow sequential machinery tools [Automotive industries]
- FMS of equally designed compensating machinery tools [Automotive industries]
- Measuring, machining and inspection centre for turbine fabrication [aircraft industries]
- Event driven regulation component of a machine control [machinery tools]
- Offline programming station [machinery tools]
- Automation of machine cells [mold & die manufacturing]

Development systems:

- Extraordinary Windows™-applications are developed using DELPHI™, default wise
- Highly reliable controls are based on industrial PCs, running Soft-NC und Soft-PLC™, default wise.

Consultancy:

- Optimal organisation structures for your workflow and efficient machining strategies especially for sink erosion are jointly designed with our specialists.

CNC:

If your machines have to react on events (event driven process optimization) then our control is best suited. You can get the whole moving apparatus, brought in to operation (up to 32 axes). Especially for die sinkers you can get generator, utilization and technology in addition.

Slogan „steering innovations“

For your benefit we want to support you in investing controllable enterprises and in controlling innovations – just “steering innovations”.

You being successful is our liability. Only if you are successful we'll be successful, too.
